

# THE PROJECT TEAM AT SURF

..

### **Our COVID Journey**

### **30-DAY CRISIS PRODUCTION**

THE LONG HAUL

END OF LINE

in this phase we found ourselves in a crisis situation, we had 30 days from the first phone call to deliver a distribution network capable of delivering an estimated 500,000 self-test a week.

After the initial general availability of the platform and after all short-cuts we took we needed to tidy up the logistic processes and focus on the legitimacy of the procurement processes.

This phase was characterised by politics and doubt since the number of infections after the summer was relatively low.

Since running a distribution platform of self-tests is not the core-business of an NREN we tried to wind down the operations but reality kicked in by increasing number of infections, and various scenarios of the Ministry of Education

# Spring 2021, How to Re-Open the Universities and Schools?

- The Plan
  - Students and staff need to perform a COVID19 self-test twice a week
  - Over 50 Millions of these tests were ordered by Ministery of Health
  - Bi-weekly distribution to all campus/school locations
- However
  - Logistic challenges in handing out the Self-Test at the campus locations → Administration, large concentration of people, discipline to return home (to test or after positive test?)
  - Self-Test ordered not in stock, amount and brand yet unknown
- To Sum Up → A great plan but a bad idea...

- Different approach
  - Distribute the COVID19 Self-Test directly to the homes of the students and staff
  - Make it an On-Demand process → Simple Order Process (web shop, but way more simple)
  - For Students & Staff Only → federated identity management
- Safeguard security, privacy, scalability but also legality
- All the characteristics of an exciting start-up company
- "Oh one more thing, you have 30 days from now"

- Develop a Web portal to place order for tests kit, students and staff only (closed user group)
- Procure the outsourcing of the e-fulfilment, logistics and distribution
- Establish the help desk or customer service because things will go wrong (reputation management)
- Governing of the entire process managing the chain
- While (not) managing lots of unknowns
  - No numbers on the willingness of those 1.6M students and staff to order the tests → 2x week testing → results in 2M tests a week
  - This high uncertainty and risk aversion due to politics very difficult to make decisions

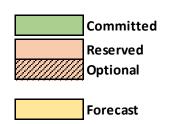

### Prepare for Maximum Capacity and Cost

Distribution (potentially)								
Amount of Self-Tests:	<u>1.400.000</u>	<u>2.000.000</u>	<u>1.500.000</u>	<u>2.000.000</u>	<u>2.000.000</u>	<u>2.000.000</u>	<u>2.000.000</u>	<u>12.900.000</u>

Distribution Mailbox+Track&Trace 4 Se		4 Self-Test per Order			8 Self-Test per Order is possible					
500.000										
400.000		Mother's Day	Ascension		Whitsun					
300.000	<u> </u>			300.000	225,000	300.000	300,000	300.000	300.000	
200.000	<u> </u>									
100.000	<u></u>	300.	50.000 000	200.000	150.000	200.000	200.000	200.000	200.000	
4	4 /4 u		nits	/4 units	/4 units	/4 units	/4 units	/4 units	/4 units	
# per Order	Date	03/05/2021	10/05/2021	17/05/2021	24/05/2021	31/05/2021	07/06/2021	14/06/2021	21/06/2021	
	Sequence	1	2	3	4	5	6	7	8	
	Weeknr	18	19	20	21	22	23	24	25	

# PRODUCTION PHASE

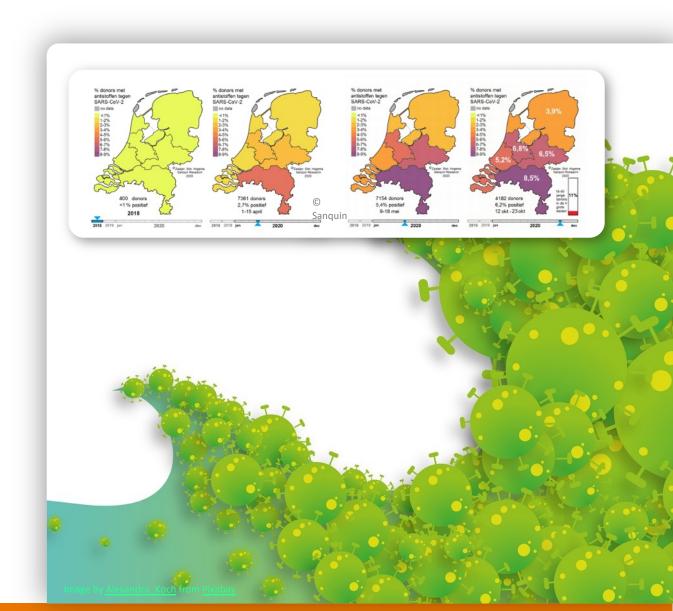

- After Launch we needed to tidy up the process, clean-up the short-cuts
  - Legality of all suppliers and proper tender process
  - Reduce the Back-log items Portal development
  - Efficient Customer Service & Care (staff of 10)
  - Provisioning; expectations vs reality
- Recoupment of previous decisions based on too little data
- Pitfall M&M's → Multiple disciplines, More people, Mean
  Management

# THE LONG HAUL

### Surfing the COVID waves...

- Theory: short term (one-shot) project for 2 months
- Reality: Full year service, working too good. It is hard not to continue
  - More and more real professionals in-place
  - Strategic attention replaced by operational service and expertise
  - Logistic challenges under control and streamlined work processes
- However
  - Recurring COVID in waves
  - Less and less an NREN service

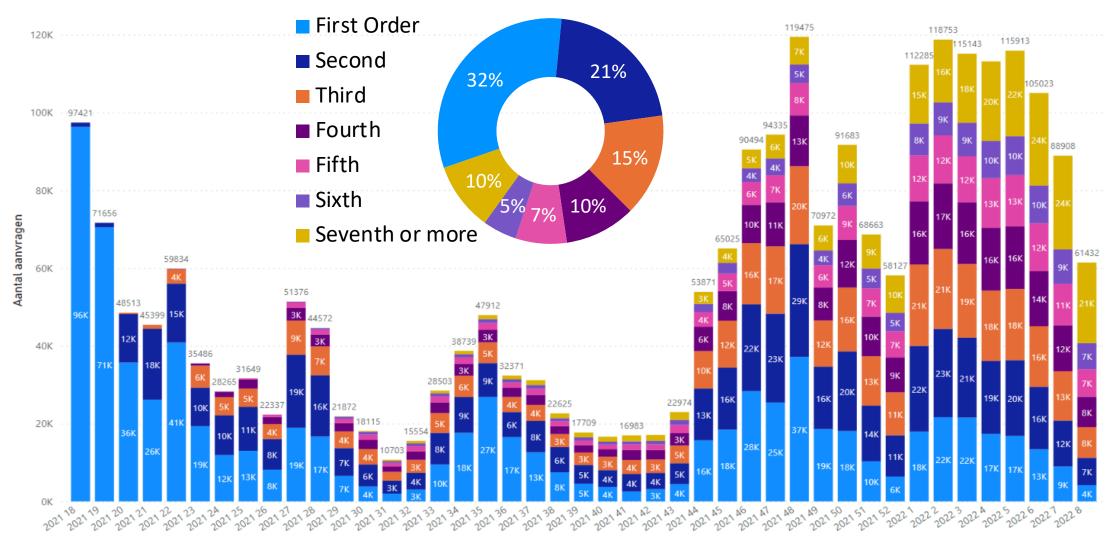

## THE LONG HAUL

### Lies, damn lies and statistics

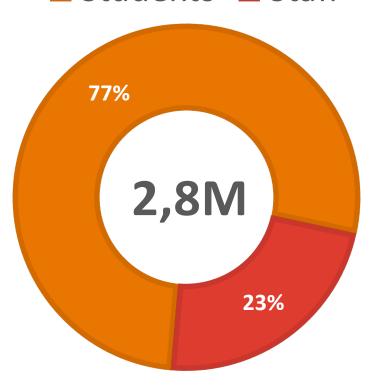

# THE LONG HAUL

### One Year of Project results

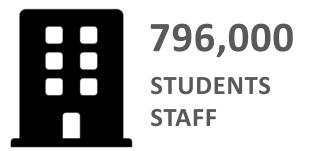

12,670,000

**ORDERS** 

**SELF-TEST** 

**COVERAGE** 

## **END OF THE LINE**

- Multiple tries to really quit the project, but we failed miserably due to
  - Risico aversion (politics) what to do with the next wave?
  - No plan (policy) what to do with the next wave?
  - Simply too good (operations) if it works don't kill it?

### **LESSONS LEARNED**

#### **WELL POSITIONED**

If you can link it to your mission as NREN, then you are like a spider in a web Everything can be made: Although you are not a logistics expert, you can play a role in this, but remember that you can be tied down for a long time.

#### **POSSIBLY LONGER**

#### THEN CONTEMPLATED

### **LESSONS LEARNED**

### **MAKE DECISIONS**

### **BASED ON TOO LITTLE INFORMATION**

In crisis, one must learn to make decisions which will hit you in the face hard later on, be prepared to solve them (later)

### **LESSONS LEARNED**

**Crisis**: agile, have to let go of other work, 200% commitment, fierce growth

**Production**: tweakers, improve, pruning, consolidate

**Long-haul**: regular professionals (boring...)

**End-of-line**: kill your darlings when the stopping gets tough

#### **EACH PHASE IS DIFFERENT**

Other dynamics, different kind of people & expertise needed (also applies to other projects and situations, you need this as NREN organisation)

# **Driving innovation together**
